MISCELLANEOUS.

Handling.

1. On 10/2/15 a marmoset underwent a surgical procedure under general anesthesia as per the IACUC approved protocol. Thermal support for the animal was needed during the post-operative recovery period but the heating blanket normally used was not working properly and an alternate method was used to provide thermal support under the direction of the attending veterinarian. The marmoset subsequently sustained thermal injuries that were recognized by veterinary personnel during the immediate post-operative recovery period. The animal was immediately examined by the attending veterinarian and treatment was instituted. The marmoset's condition deteriorated despite the treatment prescribed and the animal died 72 hours later.

Per this Section of the Regulations, handling of all animals shall be done as expeditiously and carefully as possible in a manner that does not cause trauma, overheating, behavioral stress, physical harm, or unnecessary discomfort. The use of the alternate method to provide thermal support to the marmoset during post-operative recovery induced thermal injuries that resulted in the death of the marmoset.

Upon being notified and in response to this incident, the research facility acted promptly and conducted an investigation, reported the incident to OLAW and USDA, and swiftly implemented appropriate corrective actions to prevent any future incidents. Additional surgical procedures have taken place since the corrective measures were implemented, and no additional incidents have occurred.

The research facility has taken appropriate steps to address this item and it has been corrected.

Inspection Report

board was broken off and on the ground inside the pen. The missing piece of the board created a space in the fence large enough for a cow's head to fit through.

Per this Section of the Regulations, outdoor housing facilities should be structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

The research facility needs to repair or replace the broken board to maintain the enclosure fence in good repair and to ensure the structural strength of the pen.

Correct by 5/17/16.

NOTE - Inspection conducted 5/9/16 and 5/10/16. Exit interview held 5/10/16 on-site with facility representatives.
